

TN-GLMS

End-to-End Demo Handout

Smart India Hackathon | PS 26016 | National Land Acquisition & Management System

The story in one sentence

A community bridge moves from a citizen need to transparent delivery, with every decision, family outcome and public update in one auditable record.

1

Public entry

Request a project

Track notices & grievances

2

Plan lawfully

GIS parcels & SIA

Role-based approvals

3

Protect people

Award & compensation

R&R, heirs, services

4

Deliver openly

Tenders & field evidence

Reports & public status

Live path

Public portal > District dashboard > Koraput River Bridge Project >

Overview > Documents > Compensation > R&R & Families > Legal > Tenders > Reports

Use the 'Switch demo role' control to show why authority and accountability matter.

See live-demo-runbook.md for exact clicks, narrative and fallbacks.

TN-GLMS

Presenter Checklist

Run this in a local demo database - never use real citizen information or personal integration credentials.

Setup

- ☐ npm install
- ☐ npm run db:push
- ☐ npm run db:seed
- ☐ npm run dev
- ☐ Open <http://localhost:3000> and /app

What success looks like

- Public users can discover, request and track.
- Staff operate one project record across the lifecycle.
- Legal / permission controls are visible, not implicit.
- Families, field evidence and delivery progress remain accountable.
- Portfolio reports support timely intervention.

Recovery lines

Map issue: 'The lifecycle and evidence remain available; this is the project's auditable record.'

Integration issue: 'External channels are optional; the demo uses seeded, non-personal data.'

Closing

TN-GLMS turns a fragmented, legally sensitive process into a transparent, role-aware and evidence-led public service lifecycle.
